Education

Concordia University **January 2023 - May 2027**

Bachelor of Software Engineering, Co-op Program *GPA: 3.31*

Work Experience

Intact Assurance **January 2025 – Present**

Software Engineer *Montreal, QC*

- Worked across backend and infrastructure to deliver **Java** and **Spring Boot** microservices automating insurance policy workflows, scaling to **500K+ monthly transactions** in production.
- Developed and deployed **Automated Underwriting**, enabling brokers to automate approval steps previously handled by managers, cutting manual work in half and delivering a full cost recovery ratio (**1:1 ROI**).
- Optimized a high-traffic microservice by refactoring database queries and streamlining API calls, reducing average response time by **44%**.
- Designed and implemented **Component Tests** from scratch for a critical microservice, achieving **90%** code coverage and significantly enhancing code quality
- Resolved **30+ defects** reported in production and testing, reducing error rates and strengthening user confidence in core applications.
- Resolved **100%** SonarQube critical and blocker issues across a high-traffic microservice, reducing technical debt and improving **system stability and maintainability**.

Projects

Expense Tracker | *Source Code* **Spring Boot, MySQL, Java, Angular**

- Developed a web application to track and visualize personal expenses, integrating **Spring Boot** with **MySQL** for robust data handling.
- Integrated **Spring Security** with **JWT-based authentication** to enforce role-based access control and safeguard financial data.
- Built interactive dashboards using **Angular** providing real-time insights and analytics on user expenses.
- Implemented a flexible filtering system allowing users to query expenses by date range or category (e.g., incomes vs. expenses), enhancing data analysis and usability.

Ultimate Website | *Source Code* **ReactJS, MongoDB, Node.js**

- Developed a multi-game arcade website with **React** and **Tailwind CSS**, providing a responsive and user-friendly interface.
- Implemented user **account creation** and session management using **MongoDB** and **Node.js/Express** for data storage and authentication.
- Tracked user activity (e.g. *time spent on site*) for personal statistics, enhancing user engagement and retention.
- Engineered a complete chess game in **JavaScript**, implementing all game logic including move validation, castling, en passant, and check/checkmate detection.

Awards

ConUHacks IX Winner | *Source Code* | *DevPost* **2025**

- Winners at Quebec's Largest Hackathon (**900+ Participants**).
- Secured the win by excelling in the **Beenox** Sponsored Challenge, where the team developed a fully functional **Multiplayer** video game in 24 hours using only **Java**.
- Collaborated in a team of 4, efficiently handling **Git** requests and thriving under **high-pressure** deadlines.

Technical Skills

- **Languages & Databases**: Java, Python, SQL, JavaScript, HTML5/CSS3, MySQL, PostgreSQL, MongoDB
- **Frameworks & Libraries**: Spring Boot, Angular, ReactJS, Node.js
- **Tools**: Git, Docker, Postman, SoapUI, Jira, Confluence, IntelliJ IDEA, VS Code
- **Concepts**: RESTful APIs, Microservices, OOP, Agile (Scrum) Methodologies, Unit Testing, Data Structures & Algorithms
